## On the Subject of Hinges

Make sure the module doesn't fly at your face!

- Some of the hinges on the module are missing!
- Find the first missing hinge starting from the bottom right and going clockwise.
- Order the hinges from 1 to 8 starting with the missing ones and going counterclockwise.
- The rest of the hinges are ordered starting from the first present hinge after the last missing hinge (still going counterclockwise) and then going clockwise.
- Use the top two hinges' value in the first table (column then row), then take the number and use it in the other table, and press the hinges according to the order in the table.
- Repeat until all the hinges are off of the module!
- When repeating, start with the first missing hinge clockwise from the hinge whose value was 8 on the last set of hinges.
